

Reverse the String Activity

The Reverse the String activity allows you to reverse the characters in a given string. This activity is useful for situations where you need to manipulate text data in your UiPath workflows.

Properties

The Reverse the String activity includes the following properties:

- **InputString (String)**: The input string to be reversed.
- **ReversedString (String)**: The output of the activity, which will contain the reversed version of the input string.

Usage

Here is an example of how to use the Reverse the String activity in your UiPath workflow:

1. Drag and drop the Reverse the String activity onto your workflow canvas.
2. In the Properties panel, enter the string that you want to reverse in the InputString field.
3. Optionally, you can assign the output of the activity to a variable by specifying a name in the ReversedString field.
4. Run the workflow to execute the activity.

Error Handling

The Reverse the String activity includes error handling to catch any exceptions that may occur during execution of the activity. If an exception occurs, the activity will fail and an error message will be displayed in the Output panel of UiPath Studio.

Localization

The Reverse the String activity supports multiple languages.

Known Limitations

There are currently no known limitations for the Reverse the String activity.
